Our Expertise, **Your Solution**

# IT SOLUTIONS BUSINESS UNIT

Tronic International provides one-stop turnkey IT solutions with a solid track record in delivering a diverse range of technology products, services and solutions for different industry platforms. We have established ourselves as a key provider of innovative solutions internationally and locally. At Tronic International, we believe in delivering results whilst addressing our client's needs and concerns. Our goal is to deploy effective end to end solutions that will greatly enhance our clients' business capabilities.

This is an overview of our IT Solutions business advantage.

Our IT solutions division aims to help customers be more effective, adaptable, and responsive through the application of niche IT solutions. The three business segments for the IT Solutions Division comprise the following:

## High Performance Computing Cluster (HPCC)

We provide integrated HPCC solutions for customers who need supercomputing capability for their multiple, complex computational tasks at an affordable cost. Our HPCC solutions marketed under the TRONIX brand include 1U, 2U, 4U and 7U blade servers. As a value-add service, we also provide system integration services to integrate our products with the customer's existing systems if required.

Capitalising on our strong partnerships with server/component manufacturers, we source various components from OEM manufacturers, such as the rack servers from Supermicro and switches from Volaire. With these best-in-class components and our proven expertise in HPCC, we will assemble, integrate and build a comprehensive HPCC infrastructure designed for exceptional performance and manageability at a fraction of the cost of proprietary systems.

## Mobile and Embedded Solutions

The growing demand for miniaturisation, and the increase in software, multimedia and connectivity sophistication are driving a bigger demand for high-performance and low-power consumption mobile computing devices. At Tronic International, we specialise in developing mobile embedded technology that covers a broad spectrum of applications integrating hardware, software and firmware. We design and develop mobile computing solutions that are customized to each customer's specific needs and circumstances and provide ODM/OEM services for our customers. Our mobile and embedded solutions cover a broad range of applications from e-learning tools to vehicle diagnostic tools in automobile maintenance and repair, and can be applied in various vertical industries, such as automotive, communications, medical diagnostics, and warehousing and logistics etc..

## Systems Integration Services

Over the years, Tronic International has established itself a key provider of innovative solutions both locally and abroad. At Tronic International, we believe in delivering results whilst addressing our client's needs and concerns. Our goal is to deploy effective end to end solutions that will greatly enhance our clients' business capabilities.

Our dedicated team of professional consultants and engineers constantly strive towards service excellence whilst maintaining customer satisfaction as our top priority. Our ISO9001 certification and proven track record ensures that our clients always receive only the best in service and support.

In today's ever changing business environment, it is imperative that all solutions be effective, stable, adaptable and flexible to meet current and future needs. We achieve this by harnessing only best in breed technologies and innovative deployment methods and our comprehensive suite of system integration solutions and services will meet and exceed your expectations.
